

# Epiphany Program Manager

## HELP UNDERSTAND AND MITIGATE RISK BEFORE IT IMPACTS YOUR BUSINESS

The Epiphany Intelligence Platform™ is an intuitive and powerful data context engine used to help understand and mitigate risk before it impacts your business. Many businesses are complex groupings of stakeholders and business units spanning the organization.

Successfully implementing a new technology and engraining that investment into the overall operations plan require coordination and planning between stakeholders, business units, and technical personnel. Planning and coordination are essential to not only the successful adoption of Epiphany into your environment, but also to help accelerate the maturation of the organization's cyber risk management framework.

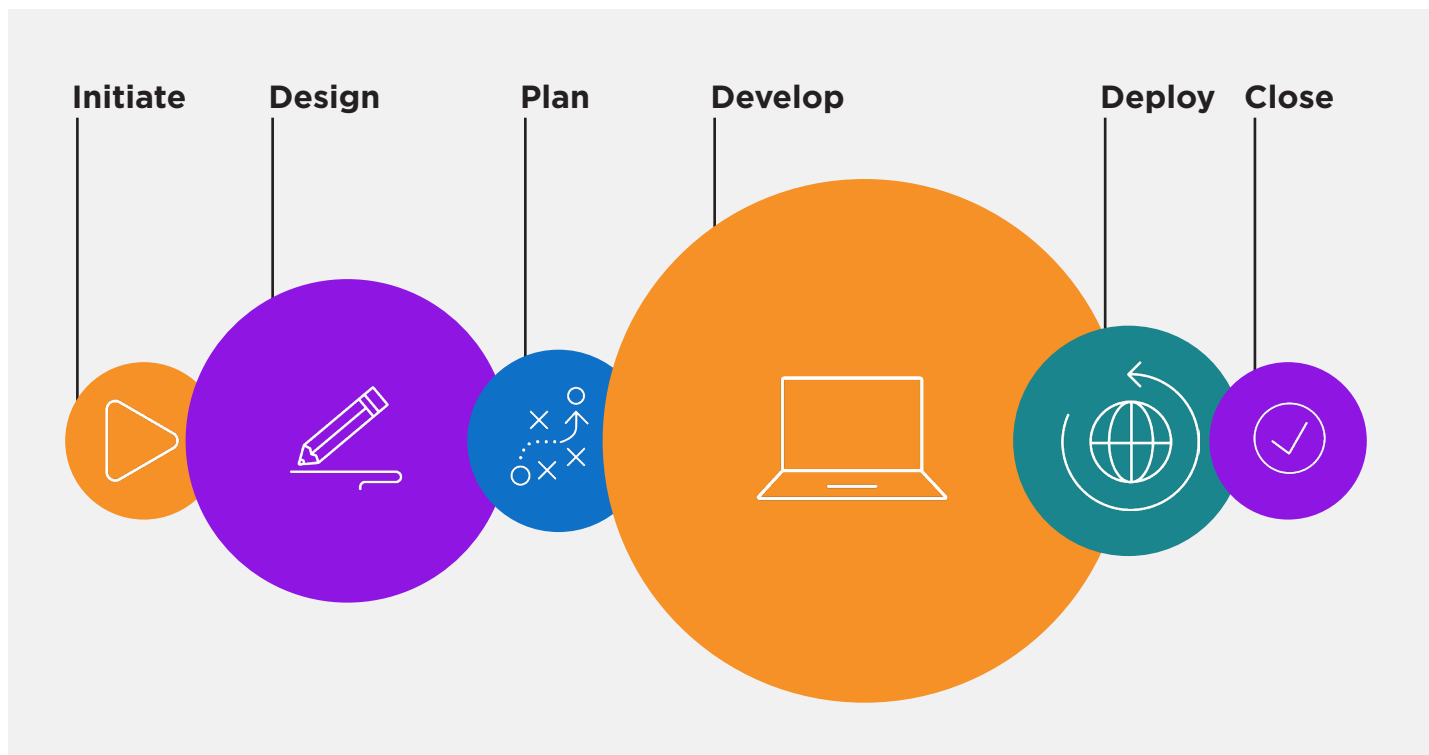

The Epiphany Program Manager becomes an integral part of your team, focused on ensuring the successful coordination, scheduling, briefing, and awareness training about what Epiphany can do for your organization.
